

Table 1. Operational definitions of postoperative pulmonary complications

Grade	Definition
1	Cough, dry Microatelectasis: abnormal lung findings and temperature $>37.5^{\circ}\text{C}$ without other documented cause; results of chest radiograph either normal or unavailable Dyspnea, not due to other documented cause
2	Cough, productive, not due to other documented cause Bronchospasm: new wheezing or pre-existent wheezing resulting in change of therapy Hypoxemia: alveolar-arterial gradient >29 and symptoms of dyspnea or wheezing Atelectasis: radiological confirmation plus either temperature $>37.5^{\circ}\text{C}$ or abnormal lung findings Hypercarbia, transient, requiring treatment, such as naloxone or increased manual or mechanical ventilation as an adverse reaction to pulmonary medication
3	Pleural effusion, resulting in thoracentesis Pneumonia, suspected: radiological evidence without bacteriological confirmation Pneumonia, proved: radiological evidence and documentation of pathological organism by Gram stain or culture Pneumothorax Re-intubation postoperatively or intubation, period of ventilator dependence does not exceed 48 hours
4	Ventilatory failure: postoperative ventilator dependence exceeding 48 hours, or re-intubation with subsequent period of ventilator dependence exceeding 48 hours

Table 2. Demographics and clinical variables stratified by %DL_{CO} risk.

	All patients (n = 408)	%DL _{CO} ≥ 70% (n = 338)	%DL _{CO} < 70% (n = 70)	P
Female, n (%)	113 (27.7)	86 (25.4)	27 (38.6)	0.025
Age (y)	66 ± 10.0	66.5 ± 9.7	63.8 ± 11.2	0.036
BMI(kg/m ²)	23.6 ± 3.5	23.6 ± 3.5	23.3 ± 3.4	0.412
