Review

- Brain Sexual Differentiation and Gender Development Osamu Arisaka (1)

Originals

- Treatment with Both Nintedanib and Steroid in Bleomycin-induced Pulmonary Fibrosis Model Mice didn't Inhibit Lung Fibrosis Sadaaki Shiromori et al (9)
- Pre and Post Synaptic Mechanisms about the Peripheral Nerve-injured Plasticity of Nociceptive Transmission in the Superficial Dorsal Horn of Mouse Spinal Cord Yuya Sato et al (23)
- Effect of *In-vivo* Administration of Nafamostat on the Onset of Renal Hyperkalemia and Association of Urine Kallikrein in Rats Teppei Yamada et al (33)
- Heparin Administration Expands Flap Survival Area Possibly by Increasing the Concentration of Hepatocyte Growth Factor Takeshi Kan et al (43)
- Examination of 40 Cases of Orthostatic Stress Electrocardiogram (Schellong test) Performed in our Pediatric Department —Relationship with Postural Orthostatic Tachycardia Syndrome— Kohei Nomura et al (51)

natively, a legend key should be included in the figure. Statistical significance (eg, *P* values) should be clearly defined by asterisks (*, **, ***) or by other sequential symbols: †, ‡, ¶; these may be doubled up if needed. *P* values should be labeled by symbol in the image, with definitions appearing only in the legend (eg, **P*<0.05, ***P*<0.01, ****P*<0.001). Labeling of data as not significant (NS) is unnecessary. All abbreviations should also be defined.

IV-ix) Digital Art

Digital figure files are required for submission. The DJMS requirement for color images is RGB (Red, Green, Blue) color mode. The preferred file formats for digital figures are TIFF and JPG. Embedding images in Microsoft Word is strongly discouraged as individual image files will ultimately be required for accepted manuscripts when being sent into production. Use of PowerPoint (PPT) files and Excel (EXL) files is also discouraged.

IV-x) Data Supplements

Figures and tables that are critical to the evaluation and understanding of the research presented, but which cannot be accommodated via the print medium (eg, video) will be considered part of the manuscript submission. Details of reagents (ie, oligonucleotides, antibodies) should be part of the main manuscript and not Supplemental Data. Such files will be peer reviewed and published on the Journal website if the manuscript is accepted. Inclusion of supplementary material is at the discretion of the Editors, and data may be moved to the main article at their request. Supplemental figures (PDF, TIFF, JPG, or PowerPoint files), tables (Microsoft Word or Excel files), and legend (Microsoft Word files) should be prepared as above. Supplemental material published on the Journal website is subject to the same copyright as applies to the printed article.

V. Editorial Review

When a manuscript is received, it is examined to

determine whether its style meets the journal requirements. If it does, the manuscript is sent to two independent peer reviewers to be selected by the Editorial Committee. On the basis of their evaluation, the manuscript is either accepted, returned for revision, or rejected and returned to the author from the Editorial Office. A manuscript in need of revision will be returned to the author with specific suggestions. The author should respond to each of these suggestions with a cover letter and/or stating reasons for disregarding the suggestions if they are thought to be unacceptable.

VI. Copy Editing

After the manuscript is accepted for publication, your accepted paper may be substantially edited by the copy-editing service. If the editorial office finds that the final version's writing is still inadequate, your paper will be copy edited again by the copy-editing service provider that editorial office selects, and you will be charged for that service. Failure to comply with this process will result in the rejection of your paper. A copy-edited proof will be sent to corresponding author within a few weeks. Authors should review the proof and return requested corrections within 48 hours. No new insertions should be made in the text at the time of proofreading. Corrections other than the printer's errors should be avoided.

VII. Publication Fees

Authors must pay 26,000 Japanese yen for the first 10 printed pages as a fee for publication, except invited article. If the manuscript is more than 11 printed pages, there is an increasing charge 2,000 Japanese yen per 1 printed page. Publication charge of invited paper is free.

VIII. Offprints

Authors will be given an opportunity to order offprints of their papers before their publication. Purchase orders, once placed, cannot be cancelled. It costs 50,000 Japanese yen per 100 pieces of manuscripts.
