120°	0.857	0.002*	120°	0.412	0.237
Full flexion	0.661	0.038*	Full flexion	0.818	0.004*

MFT, LFT: distance from the tangent passing through the most anterior edge of the tibial tuberosity to the medial and lateral femorotibial cartilage contact point; MS1, LS1: distance from the tibial tuberosity to the posterior edge of the anterior horn of the medial and lateral menisci, respectively; MS2, LS2: distance from the TT to the anterior edge of the posterior horn of the medial and lateral menisci, respectively

\*significant relationship †Spearman's correlation coefficient
